

BURTONS MANOMETER PRESSURE GAUGE FOR CYCLO-FLO

103-080-31

PRODUCT DESCRIPTION

Burtons Manometer Pressure Gauge for Cyclo-Flo Circle Circuit

The Stainless-Steel Burtons Manometer Pressure Gauge for the Cyclo-Flo will help you monitor patient circuit pressure and the pressure on breaths, helping you to identify when breaths are being taken by your patient. It measures both positive system pressure (up to 60cmH₂O) and negative system pressure (down to 30cmH₂O). It is a safe and accurate way to monitor pressure when delivering positive end-expiratory pressure ventilation. The use of a manometer prevents iatrogenic barotrauma to the patient while still ensuring adequate pressures are reached for optimal ventilation.

The Burtons Manometer Pressure Gauge for the Cyclo-Flo have a standard (British Standard Pipe) connector that threads into a grommet on top of the main Cyclo-Flo unit.

Key Features:

- Measurements are in cmH₂O
- Colour-coded range of 0-60cmH₂O Pressure and 0-30 cmH₂O Vacuum
- Can be attached to the Cyclo-Flo Circle Breathing System
- Attachment location: On top of the Cyclo-Flo main unit, threads into a grommet connection via a ¼ BSP (British Standard Pipe) (13.16mm) connector
